LinkedIn: Minh Long Nguyen

SKILLS

Languages
Java, TypeScript, C#, SQL

Backend
Spring Boot, Node.js (Hono), ASP.NET Core, REST API, Kafka, Redis, Keycloak

Frontend
React, Angular, Astro, TanStack Query, HTML/CSS

Databases
PostgreSQL, MySQL, SQLite, Cloudflare D1

Cloud & DevOps
Cloudflare Workers (D1, R2, Cron), Docker, Git, Jira

AI & Automation
MCP servers, LLM integration (Gemini, OpenAI-compatible APIs), AI coding agents (Claude Code, Gemini), Chrome DevTools Protocol

Testing
Vitest, Playwright, functional testing, Katalon Studio

EDUCATION

Ho Chi Minh City University of Technology (HUTECH)
Software Engineering, 2022 – 2026
Graduated Oct 2026
GPA: **3.54 / 4.00**

AWARDS & CERTIFICATES

Outstanding Student
HUTECH, every year 2023 – 2026

English, CEFR B1
Center of Informatics, Foreign Languages & Skills

NGUYEN MINH LONG

Software Engineer (Backend / Full-stack)

SUMMARY

I build internal tools and AI-agent integrations with TypeScript on Cloudflare Workers at Viemind, with a Java Spring Boot foundation from my internship at FPT IS. Goal for the next 1–2 years: become a backend engineer strong in system design and automated testing, and bring AI into real products in a controlled way.

WORK EXPERIENCE

Viemind Vietnam | Fresher Software Engineer — Sep 2026 – Present

Internal tools and AI-agent integrations for the company's e-commerce business. TypeScript, Hono, React, Cloudflare Workers, MCP.

- **Product catalog management & sync tool:** built an internal web app, CLI and MCP server for automated product-photo editing (on-device ISNet background removal, adjustments through the Gemini API) and for syncing 370+ products to the CMS, with read-back checks after every write, backups and restore.
- **AI-assisted comment handling system** (in pilot): built a service on Cloudflare Workers (Hono, D1, Cron) that drives Chrome over CDP and uses an LLM to classify Facebook/TikTok comments and suggest replies, with a PII filter and a manual approval flow.
- **Company e-commerce website** (Astro 5 SSR on Cloudflare Workers): improved the mobile UI and built the Vietnamese/English interface, the product variant picker and structured data for SEO.

FPT IS | Software Development Intern — Apr 2026 – Jul 2026

Java 17, Spring Boot, Angular, PostgreSQL, Redis, Kafka, Docker | GitHub | Demo video

- **eProcure Enterprise** (individual internship project): built a procurement system of 9 microservices covering the whole flow from purchase requests and multi-level approvals to purchase orders, goods receipt, invoice matching and payment.
- Applied Clean Architecture, event-driven messaging over Kafka, role-based access control (RBAC) with Keycloak, idempotent writes, Flyway schema migrations and OpenAPI specifications with automated tests.

ACADEMIC PROJECT

Student Dormitory Management | Team Lead — Feb 2026 – Apr 2026

Team of 6 | Java 21, Spring Boot, PostgreSQL, JWT, PayOS, Jira | GitHub

- Split the work, tracked progress and integrated the team's features through Jira.
- Designed the database and built the core flows: room/bed selection, residence registration, monthly utility billing and PayOS payments (payment links and webhook reconciliation).
